Apple Media Tool: Slow QuickTime When Controller Enabled (7/95)

Article Created: 07 July 1995

TOPIC ---

I am using the Apple Media Tool, and I get slow, jerky playback of my QuickTime
movie when the QuickTime controller bar is enabled. Movies play fine if the
controller bar is not present.

DISCUSSION --

The slower playback is normal when running a project from within the Apple Media
Tool program. Controller performance is corrected when the project is made into
a runtime.

To check true QuickTime performance:

Step 1

Save project as text.

Step 2

Use Runtime Maker to compile the saved text file (.k file) into a runtime.

Step 3

Evaluate QuickTime performance in the runtime.
