Apple Media Tool: Runtime Doesn't Reset Display Depth (8/95)

Article Created: 17 August 1995

TOPIC ---

The display settings have changed after running a program created with the Apple
Media Tool. Is there a way to have the display settings swiched back their
original state?

DISCUSSION --

Runtime applications created by the Apple Media Tool automatically switch
monitor settings to the color depth specified in the runtime. However, it does
not switch them back to the original settings after quitting the runtime, so you
must switch them back manually.
