AMTPE: Installation Corrections (3/96)

Article Created: 29 March 1996

TOPIC ---

I purchased the Apple Media Tool Programming Environment (AMTPE), and cannot
install the product on my hard disk properly. I am following the installation
instructions included with the product, but they are somewhat confusing.

DISCUSSION --

There are a couple of things you need to do that the installation instructions
do not cover.

Step 1

Drag the Folder called MPW from the CD-ROM to your hard disk.

On page 2-2 of Getting Started the manual tells you to drag the folder called
MPW for AMTPE from the CD-ROM to your Macintosh. However, the folder is named
MPW on the CD-ROM, not MPW for AMTPE.

Step 2

Drag the Contents of AMTPE Mac from the CD-ROM to your hard disk.

The folders Key, and Standard and Minimal Engines are in the AMTPE Mac folder.
These folders are required later in the installation process.

Step 3 - Power Macintosh Users Only

If you are using a Power Macintosh computer, you need to drag the StdCLibInit
from the System Folder Additions folder to your Macintosh System Folder, then
restart your computer.

This step is missing from the original documentation.

Manual Error

On page 2-4 under Initializing Your AMTPE Tools, step 3 should say click the Directory button, not click the Select Current Directory button.

Once you get everything right in the MPW folder then it works properly.
