Apple Media Tool 2.0: Mouse Up Events Issue (4/96)

Article Created: 11 April 1996

TOPIC ---

In Apple Media 2.0, when trying to use a "Mouse Up" event for an object, the
event is sent regardless of whether the pointer is within the hot spot of the
picture when the mouse is released.

DISCUSSION --

This behavior is being investigated by Engineering. In the meantime, there is a
workaround.

Workaround
==========

For any object where this "Mouse Up" behavior is a problem, include a
"Mouse Leave" event with a "Go to itself" link. This should prevent the Mouse
Up event from processing when the mouse is released outside of the hot spot.
However, this workaround may affect the playback of sounds and movies any time
the pointer leaves that hot spot.
