QuickTake: System Requirements (5/94)

Article Created: 11 May 1994

TOPIC ---

What are the system requirements for the QuickTake camera software? I need this
information for customers who are "on the edge" in terms of memory and storage.

DISCUSSION --

According to page 2 of the Apple QuickTake 100 User's Guide, the System
requirements are as follows for the QuickTake 100:

• a Macintosh with a 68020 or higher CPU (any Macintosh except a Macintosh
  Plus, SE, Classic, Portable, or PowerBook 100)
• system software version 7.0.1• (with Tune-Up 1.1.1) or a later version
• 4MB of RAM with 8MB of virtual memory or 8MB of RAM
• Apple SuperDrive (or any floppy drive that can read high-density disks)
• a hard drive with at least 10MB available
