QuickTake 150: Image Quality Differences (8/96)

Article Created: 15 August 1996

TOPIC -----

The QuickTake 150 high quality and standard quality pictures are both listed as 640x480 pixels. If they are both the same size what is the difference between the high quality and standard quality pictures?

DISCUSSION -----

Unlike the QuickTake 100, which had two different resolutions, the QuickTake 150 uses the same resolution for both high and standard resolution images. The difference is in the compression ratio.

Compression Ratios

=====

High resolution images: 1.5 bits per pixel
Standard resolution images: .75 bits per pixel
