Multimedia Kit for Macintosh: No PMMU Required (10/93)

Article Created: 28 October 1993

TOPIC -----

The press release for the Multimedia Kit for Macintosh says that a PMMU is required. Why is that? The AppleCD 300 and the AppleDesign speakers individually don't require it.

DISCUSSION -----

The press release is in error: a PMMU is not needed. The kit should work with any 68020-class systems with 5MB RAM or more.
