QuickTime Conferencing: Firewall Issues (5/96)

Article Created: 3 June 1996

TOPIC --

We have a firewall on our large campus network. QuickTime Conferencing (QTC)
works fine inside the firewall, but when trying to go through it, the TCP/IP
port appears to be selected at random. Is there a way to specify the port so we
can configure the firewall to let QTC work?

DISCUSSION ---

QTC will not work across firewalls, but the router can be reconfigured with the
proper "well known port number" 458 (Conference) & 545 (Broadcast) to
accommodate QTC packets. Unsecured range is 6000-6255, but it may change.
