Power Macintosh: Apple Media Tool 1.1 Compatible (5/94)

Article Created: 23 May 1994

TOPIC -----

I just purchased a Power Mac 7100 AV and the Apple Media Toolkit 1.0 to develop multimedia products and solutions. As soon as I launch Apple Media Tool I get the message "This application needs the 68030 processor!" and quits. Is the Apple Media Tool incompatible with the Power Macintosh?

DISCUSSION -----

Apple Media Tool 1.0 is incompatible with Power Macintosh.

Version 1.1 of Apple Media Tool works with all the Power Macintosh models.

APDA has been notified about the incompatibility of version 1.0 with Power Macintosh machines, and they will try and screen callers to make sure they order version 1.1 for Power Macintosh machines.
