## Apple Video Player 1.3.2: Where is Tint Control? (11/95)

Article Created: 17 November 1995

TOPIC -----

I upgraded from Apple Video Player version 1.0.3 to version 1.3.2, and I noticed that the Tint control is now missing from the Controls window. The Contrast option has taken its place. Why?

DISCUSSION -----

The reason for switching the control from Tint to Contrast is Tint had no effect on non-NTSC video systems, such as PAL and SECAM. Changing the Tint setting to Contrast offers European customers the same adjustment flexibility as US customers using Apple Video Player.
