Newton OS 2.1: No Desktop connection Using IrDA (3/97)

==

Article Created: 12 March 1997

TOPIC --

The Dock application on the MessagePad 2000 and the eMate 300 list an option to
connect to my desktop computer using IrDA. This is also mentioned in the
MessagePad 2000 User's Manual (p.128) and the eMate User's Manual (p.160). How
can I connect to my desktop unit using IrDA?

DISCUSSION ---

The IrDA option appears within the DOCK application on both the eMate 300 and
MP2000. Although there is support in the Newton OS for IrDA connections,
currently there is no support for this in the Newton Connection Utilities or any
other connectivity application. Apple currently has no plans for implementing
this feature into the Newton Connection Utilties.
