Half-Height Drive: Physical Dimensions (4/97)

=====  
Article Created: 09 April 1997

TOPIC -----

What are the physical dimensions of the half-height drives?

DISCUSSION -----

A typical 3.5-inch low-profile (1-inch high) HDA, also known as "half height", has the following physical dimensions.

Physical dimensions:

Height 1 inch  
Width 4 Inches  
Length 5.75 Inches

Other form factors in popular use on the Macintosh line are full-height drives, meant for use on the earliest all-in-one Macintoshes and the third-height drives supported by the mounting brackets used in the Workgroup Servers like the Power Macintosh 8550.
