NEC 8Xe CD-ROM: Raising Cache (4/97)

=====
Article Created: 16 April 1997

TOPIC -----

I have a PowerBook Duo 2300, running System 7.5.5, with a NEC 8Xe CD-ROM drive connected. The system locks up with a system error when I access the CD-ROM drive. Is my system broken? Are these devices compatible?

DISCUSSION -----

The devices are compatible. The behavior you describe can be eliminated by raising the NEC CD-ROM drive's cache to at least 256K, using the NEC control panel software.
