Mac OS 8: Not Compatible with Apple WorkGroup Servers

TOPIC

I want to install Mac OS 8 on my Apple WorkGroup Server, but when I get an error that states "This program cannot update the hard drive drivers on the listed devices." How can I install Mac OS 8 on this server?

DISCUSSION

Mac OS 8 is not supported with any configuration of server software at this time. In addition, Apple RAID has not been qualified with Mac OS 8 either.

The error message you received can also appear with certain other Apple branded hard disks since some hard disks are manufactured by third-parties, and are not supported by the Apple disk utilities, including the external 365 MB drive. Before installing Mac OS 8, contact the manufacturer of the drive utility that you use to determine if you need to update your drivers.

If the Apple WorkGroup Server is being setup as a workstation, you should the disk driver using the Drive Setup software.
