Newton Internet Enabler: MP130 update 2.0 (526167) (6/96)

Article Created: 25 June 1996

TOPIC ---

I came across this new system update (526167) while downloading the newest
version of the Newton Internet Enabler. I checked my Newton 130 and it is 2.0
(526060). Is this update newer than the one which shipped with the 130 and what
is it for?

DISCUSSION ---

The newest Newton system update for the MessagePad 130 (version 526167) is used
to correct problems with applications that allocate large chunks of store
memory, such as the Newton Internet Enabler (NIE).

Developers of products which use the NIE may also be distributing this update.
This update will not be part of any official system update offered to MessagePad
owners at this time.

This update is designed for the NIE developers and for customers who purchase a
product that uses the NIE software. The update can be found on the Apple
Developer Services web site.

For developers, questions on NIE v1.0 will be addressed through the usual
channel of support (for US and Canada, DEVSUPPORT@applelink.apple.com). Other
users can send mail to NEWTONDEV@applelink.apple.com.

Any particular NIE connectivity issues must be addressed with your Internet
Service Provider.
