Newton Connection Kit: Exporting Repeating Meetings (4/94)

Article Created: 12 April 1994

TOPIC ---

Why does the Newton Connection Kit 2.0 for Macintosh export repeating meetings
to other applications as individual meetings?

DISCUSSION --

Repeating meetings are exported as individual meetings to handle the
requirements of the application program that the information is imported into.
This is done because there is a need to handle exception meetings. Most
applications do this by storing repeating meetings as individual meetings. For
example, create a repeating meeting for every Tuesday. Then pick one week that
you have to go to the dentist on Tuesday but you still need to have the meeting
so you change the meeting to Wednesday. Now you have repeating meetings for
Tuesdays with one exception meeting for one week on Wednesday. This information
would be lost if repeating meetings were not exported as multiple single
meetings.
