Newton Backup Utility With Newton Package Installer Open (6/96)

Article Created: 28 June 1996

TOPIC -----

Every time I try to load my backup file, created with Newton Backup Utility, from my Macintosh, I get this message "Could not download the package because none of the selected files were Newton packages."

DISCUSSION -----

This will happen when another Newton Connection utility, like the Newton Package Installer, is open in the background. Quit the other application and double click on your backup file again.
