Apple Wireless Messaging Service: No Area Code In PIN (3/95)

Article Created: 8 March 1995

TOPIC ---

I am using the Apple Wireless Messaging Service to send and receive pages.
However, when the Notify software dials the paging service number and connects,
an error message appears. The error states that the PIN (Personal Identification
Number) or Service is not correct in the Pager Address. When opening the
returned message an error appears that states "This letter could not be
delivered to the marked addresses." I know I entered my PIN correctly.

DISCUSSION ---

The User's Manual has an error. You are not required to use your area code as
part of your PIN. Your PIN is your beeper number (7-digit number).
