AppleLink: Printing With ImageWriter LQ

This article last reviewed: 16 March 1988

AppleLink has not been updated since the ImageWriter LQ was introduced. Consequently, when the ImageWriter LQ driver is selected, AppleLink gives an Unknown Printer Driver error when opening the ports for its own use. So, the ImageWriter LQ driver can't currently be used through the AppleLink Print Manager, nor accessed by way of Print Method. Until AppleLink is updated, here's how to use the ImageWriter LQ with AppleLink 4.0:

1. Turn off the ImageWriter LQ.
 2. Choose an AppleTalk printer driver.
 3. Turn AppleTalk on.
 4. Launch AppleLink (which starts up with the spooler shut down because of the AppleTalk printer).
 5. Choose the serial ImageWriter LQ driver from within AppleLink.
