How to Edit Modem.CCL From AppleLink

This article last reviewed: 28 April 1988

The AppleLink Modem.CCL file can be edited from within the AppleLink application.

1. Start up AppleLink but do NOT connect (select "Work Off-Line").
2. Ensure that you have selected to "Connect via Modem.CCL" under Setup.
3. While holding down both the Option and Command keys, press the letter "e" key.

This procedure opens a window displaying the contents of the current CCL file, and allows you to edit and re-save the file.

Commands sent to the serial port are preceded by the "Xmit" string, as seen in the third line of the listing below. Your modifications to the CCL file may be made either to the existing "Xmit" line or by adding a new "Xmit" with the set-up string. Changes are made in label 1 of the Modem.CCL.

```
-LABEL 1          --reset modem

Flush            go to label #2 if we see 'OK'
MatchStr 1 2     OK

Xmit ATZ\13

Wait 200         wait for OK from modem - fall thru if timeout
IncTries         timed out
IfTries 2 60     jump to label #60 if failed twice
HangUp          else hang up phone
Jump 1          try again
<None>
```

Keywords: <None>
