AppleLink: Can't Find the AppleLink Resources... Problem

This article last reviewed: 21 June 1990

TOPIC -----

My AppleLink application sometimes refuses to launch, claiming it can't find the file "AppleLink Resources" -- even when it is in the folder and has worked only a few minutes earlier.

DISCUSSION -----

The problem you are describing sounds symptomatic of multiple resource files accessible by the AppleLink application as it launches.

Run a "Find File" check to see if there are additional AppleLink Resource documents on your start-up drive or an attached file server. Placed in the right hierarchical level, AppleLink will boot the "nearest" AppleLink resource file.
