QM/AppleLink Gateway Information

This article last reviewed: 25 January 1991

TOPIC ---

I have a question concerning QM/AppleLink gateway compatibility. What is
the effect of the AppleLink mainframe changes on November 13th, 1990 for
QuickMail/AppleLink users?

DISCUSSION --

Because of these changes, CE Software created a new QM-Link package. It
contains a new QM-Link gateway and a new AppleLink.Script for the gateway.

The old QM-Link gateway will not work with the new AppleLink system. It
will crash your system. To avoid crashes, install the new QM-link gateway
(if you have not done so already).

Note: The AppleLink.Script replaces both the old AppleLink.Script and the
AppleLink(2400).Script. A "Read Me" file included in the package contains
instructions on upgrading your existing QM-Link MailCenters.

QM-Link v2.2.3a is now available on AppleLink for downloading. It is in
AppleLink Package format and is called "QM-Link v2.2.3a.PKG". It is located
in the CE Software bulletin board, located in the Third Parties folder. You
should see the "CE Software" folder. Enter the bulletin board and go into the
"Keeping Current" folder. It contains a "Software Upgrades" folder. The new
version of the gateway has been uploaded here.

If you have any problems/questions on installation, please link the
CESOFTWARE AppleLink address.
