## AppleCD 300: Audio Out Jack Impedance (9/95)

Article Created: 1 June 1993

Article Reviewed/Updated: 7 September 1995

TOPIC -----

What is the impedance of the audio out jacks on the AppleCD 300?

DISCUSSION -----

The impedance for the sound out ports of the AppleCD 300 is about 47k Ohms (High Z) . This means that the audio cable connections should be kept as short as possible to avoid high frequency losses in the audio signal.

By industry convention, Low Z (Low Impedance) consists of any impedance below 600 Ohms. High Z (High Impedance) would be in the range of 10k Ohms and above.
