## AppleCD SC: Saving Song And Disk Titles With The CD Remote DA

This article last reviewed: 29 September 1988

The CD Remote DA saves song and disk titles in the "CD Remote Programs" file in the System Folder.

The entry in the "CD Remote Programs" file is cross referenced against a CD ID number imbedded in the audio CD.

There are three resources in the "Programs" file: "IndX", "ProG", and "STR#":

- The "IndX" resource is the cross reference between the CD and the file.
- The "ProG" resource contains the sequence, if programmed, for playback of the tracks.
- The "STR#" resource contains the song and disk titles.

This cross-reference scheme allows you to type variations of the disk and song titles. The CD ID (IndX) is used to access the correct titles (STR#) and programmed sequence (ProG).

NOTE: You cannot save your entries while the audio CD is in play mode. If the audio CD is being played, the AppleCD SC does not have access to the CD ID imbedded in the disc. If a "Save" is performed during play mode, the titles are saved in the "Programs" file but not the CD ID.

Without the CD ID, the song and disk titles cannot be accessed. The CD ID is read after the Save button is clicked and before writing to the "CD Remote Programs" file.

For the proper associations to be saved, click the Save button during a period of no CD activity.
