## AppleCD SC: How To Use The High Sierra Format With AppleShare

This article last reviewed: 11 November 1988

You can install software on an AppleCD SC drive, so that High Sierra CDs can be shared from an AppleShare file server. To do this, you need a CD Setup disk (with version v2.0.1 or greater of AppleCD SC). This disk contains drivers that support the High Sierra CD-ROM format. To install, follow these steps:

1. Run the Installer program on the CD Setup v2.0.1 disk.
2. Choose the "AppleCD SC (v2.0.1)" script.
3. Select the AppleShare server start-up volume.
4. Click "Install."

After the High Sierra drivers have been installed, follow the directions in the AppleShare File Server Administrator's Guide (Copyright 1987,1988 by Apple Computer, Inc; part number 030-1343 or 030-1023 with Tell Apple card) for using CD-ROM drives.
