AppleCD SC: Audio Driver Needed to Play Sounds from Hard Disk

Article Created: 12 April 1991

TOPIC -----

I copied the contents of the Explorer CD-ROM to a hard disk, but when I start Explorer from the hard disk, there is no sound. When I put the Explorer CD back in the CD player, and then start Explorer from the hard disk, the sound works. It appears to be accessing files on the CD, rather than on the hard disk. Shouldn't Explorer work just from the hard disk without the CD version present?

DISCUSSION -----

Look at the Macintosh data files and the sound files as being two separate types of CD information. In fact, that is why you have a separate audio CD driver. When you copied the CD over to the hard disk, it couldn't copy the CD audio information. If a sound is something that is generated in a program by the computer (something that would play out of the computer's speaker), that would copy. But, if the sound is a CD audio recording (only heard from the sound outputs of the CD player), then the sound won't copy. Copyright 1991 Apple Computer, Inc.
