AppleCD 300i: How to Install Macintosh CD-ROM Setup Software

Article Created: 19 October 1992

TOPIC ---

I purchased a Macintosh with the optional AppleCD 300i CD-ROM drive. How
can I tell if the CD-ROM software necessary to run that drive is installed?

If the software isn't installed, how do I install it?

DISCUSSION --

To check for CD-ROM software, pull down the Apple menu and look for
"CD Remote". If "CD Remote" appears in that pull-down menu, the CD-ROM
software is installed.

If "CD Remote" isn't in the Apple menu, follow these step to install the
software:

1) Insert the Macintosh CD-ROM Setup disk into your computer's floppy disk
   drive.

2) Open the Macintosh CD-ROM Setup disk icon.

3) Open the Installer icon. The Easy Install dialog box appears.

4) Click Install.

5) When the installation is complete, restart your Macintosh.
