AppleVision Display Software: v1.0.1 & v1.0.2 Changes (5/96)

Article Created: 23 February 1996
Article Reviewed/Updated: 20 May 1996

TOPIC --

This article contains the changes made between Version 1.0.1 and 1.0.2 of the
AppleVision Display software.

DISCUSSION ---

AppleVision Display Software version 1.0.2 contains the following improvements:

• The 1.0.2 installer maintains compatibility with the next System Software
Update.

• A driver conflict that caused some computers to restart during the startup
process has been eliminated.

• To provide better support for computers with multiple monitors using Accurate
Color settings, changes were made to the way the Accurate Color panel updates
its pop-up menus and saved settings list.

• To shorten the startup process on computers running System Software 7.1.x, the
AppleVision extension was renamed "°AppleVision."

• After recalibration in thousands or millions of colors and restarting the
computer, Gamma settings will be saved correctly.

• To eliminate crashes caused by pressing the monitor's bezel buttons during
startup, improved error handling has been implemented. However, pressing bezel
buttons during startup is still not supported and may cause the software to fail
to load correctly.
