Macintosh: LCD Displays

Article Created: 16 July 1992

Article Reviewed/Updated: 26 July 1993

TOPIC -----

Do you know of any flat LCD display that can be connected to the Macintosh IIci or IIsi, and used in place of the regular 13-inch RGB Monitor?

DISCUSSION -----

The only one we know of is the Dynamac LCDisplay, which works with the Macintosh IIci, IIsi, and LC. Although Dynamac is no longer in business, DOVatron International (formerly Dover Electronics) has taken over sales and support of the product.

To locate a vendor's address and phone numbers, use the vendor name as a search string.

Article Change History:

26 July 1993 - Company title changed from Dover Electronics to DOVatron International.
