## Multiple Scan 15: 1024 x768 Not Supported on Macintosh (11/94)

Article Created: 18 November 1994

TOPIC -----

I noticed in the Appendix of Technical Information in my Multiple Scan 15 Display User's Guide (page 31) that the Resolution range says 640 x 480 to 1024 x 768. I can't seem to get 1024 x 768 as a selection in my Monitors control panel.

Can you confirm if the manual is incorrect, or document how to get 1024 x 768 out of the Multiple Scan 15"?

DISCUSSION -----

The manual is in the process of being revised. Macintosh computers do not support the Multiple Scan 15 display in the 1024 x 768 resolution mode.

The Multiple Scan 15 can display this particular resolution mode when used in conjunction with the appropriate IBM PC or compatible.
