## Power Macintosh: Using Sony Monitor with AV Card (12/94)

Article Created: 22 December 1994

TOPIC -----

I am trying to use a Sony Multiscan 15-in. Display on my Power Macintosh 6100AV. I can get video from the HDI-45 connector, but not when I use the AV card.

DISCUSSION -----

With the Sony Multiscan display, you need to change some of the settings on the video adapter. According to Sony, the settings you need on the wheel selector should be set to J with the DIP switches 4,7,8, and 9 set to the ON position.
