Multiple Scan 15 Display: No 512x384 Resolution (3/95)

Article Created: 31 March 1995

TOPIC -----

I want to use the Multiple Scan 15 Display in a resolution of 512x384. I tried using Display Enabler 1.2 and the System 7.5 Update 1.0, however we still cannot get a resolution of 512x384.

DISCUSSION -----

We are not aware of any software that will allow the Multiple Scan 15 Display to correctly display a 512x384 signal. Loading Display Enabler 1.2 or System 7.5 Update 1.0 will not help.

The video signal used by the 512x384 resolution is not compatible with the Multiple Scan 15 Display. This resolution uses a vertical frame rate of 60.15 Hz, and a horizontal line rate of 24.48 kHz. However, the Multiple Scan 15 Display only supports vertical rates from 60 to 75 Hz, and horizontal rates from 31 to 57 kHz. The Multiple Scan 15 monitor cannot display any video signal with a horizontal rate under 31 kHz.
