TOPIC -----

The barely visible, thin horizontal lines present on most Apple High-Resolution Monitor screens are causing problems for my LCD overhead projector. Are there any ways to reduce these practically invisible lines?

DISCUSSION -----

The horizontal line you're talking about is the Color Grid Stabilizing Wire; removing or altering it in any way would make your monitor much more fuzzy. Most overhead projectors don't go through the monitor, so the stabilizing wire shouldn't be a factor. If your projector does go through the monitor, you may want to replace it with one that connects directly to a video interface card instead.
