Macintosh 16, 21 Color Displays: Chromaticity Values (2/92)

Article Created: 21 February 1992

TOPIC -----

I'm trying to set up Macintosh 16-inch and 21-inch Color Displays with Adobe PhotoShop. I need to get the Phosphor Color settings in order to calibrate the monitors. Adobe said that these must be obtained by the maker of the monitor. What are the chromaticity values?

DISCUSSION -----

Here are the chromaticity values for the two displays.

The CIE coordinates for white are:

X=.283 ± .020
