Power Macintosh: Monitor Displays the Wrong Tint (3/95)

Article Created: 12 September 1994
Article Reviewed/Updated: 23 March 1995

TOPIC ---

When attaching a monitor to the built in video of a Power Macintosh, the
monitors video has a pinkish color. Is this a monitor problem or a problem with
the computer?

DISCUSSION --

First check the video cable connection. Power Macintosh computers with a monitor
attached to the built in video port (HDI-45), the cable must be seated
correctly. This is very important when you use the Power Macintosh Display
Adapter. The Power Macintosh Display Adapter allows a standard DB-15 video
connector to attach to the HDI-45 port on the computer.

If the colors displayed on your monitor are not correct, follow these steps:
1) Make appropriate monitor adjustments
2) Reseat the cable
3) Replace the Power Macintosh Display Adapter
4) Try another monitor

These steps should help isolate the problem.
