SCSI Cables: Extenders And Pinouts (4/94)

```
Article Created: 1 March 1988
Article Reviewed/Updated: 5 April 1994

TOPIC -------------------------------------------------------------

How many SCSI Cable Extenders can I use on my SCSI chain?

DISCUSSION --------------------------------------------------------

With the use of multiple SCSI Cable Extenders, a SCSI bus can safely cover a
distance of up to 21 feet (seven meters) between two devices, such as a CPU and
hard drive.  Typically, extender cables are 1 meter in length.

Both the Peripheral Interface Cable and the Cable Extender have a
straight-through pin configuration (1-1, 2-2, 3-3, etc.), though pins 10, 12-15,
17, 35-37, 39, 40, and 42 are not connected.

Article Change History:
5 April 1994 - Revised format, clarified issue, added info on pins not
               connected.
