HDI-30 SCSI System Cable: Connects PowerBook to a SCSI Device

```
Article Created: 23 January 1992
Article Reviewed/Updated:  31 July 1992

TOPIC -----------------------------------------------------------

Is the Apple HDI-30 SCSI Disk Adapter Cable for the Macintosh PowerBook 100
compatible with the Dayna EZ-10BASE T SCSI interface, and can I use this cable
to connect the Dayna product to the PowerBook 100?

DISCUSSION ------------------------------------------------------

No.  The Apple HDI-30 SCSI Disk Adapter Cable cannot be used as you describe.
This cable is used to connect a PowerBook 100 to another Macintosh, which
enables the PowerBook 100 to be used as an external hard drive on the other
Macintosh system.

The Apple HDI-30 SCSI System Cable is used to connect any Macintosh PowerBook to
an external SCSI device that conforms to SCSI standards. This cable is 19 inches
long and has a standard 50-pin male SCSI connector.  We don't have any specific
compatibility information about the Dayna product at this time.
