Macintosh: ADB Numeric Keypads

Article Created: 14 August 1992

TOPIC -----

I'm looking for a numeric keypad to connect to the Macintosh via Apple Desktop Bus.

Are you aware of a company distributing such a device?

DISCUSSION -----

Switchboard from Datadesk International offers keyboard modules, including a numeric keypad. Switchboard is compatible with Macintosh computers with ADB ports. An RJ-11 connector allows you to use it with the Macintosh Plus.

For PowerBooks, there's the Kensington NoteBook KeyPad with Function and Arrow keys. It comes in domestic and international versions. It's designed for Macintosh PowerBooks, and is compatible with any ADB device.

To locate a vendor's address and phone numbers, use the vendor name as a search string.
