Apple SuperDrive and 800K Disk Drive Compatibility

Article Created: 5 February 1991
Article Last Reviewed: 18 June 1992
Article Last Updated: 23 August 1991

TOPIC -----

I have a Macintosh II with an 800K floppy drive. I want to upgrade to an Apple SuperDrive (formerly Apple FDHD). Can I still use the 800K drive and have a system with two floppy drives?

DISCUSSION -----

When upgrading a Macintosh II system to include a SuperDrive, new ROMs (Macintosh IIX ROMs) and a SWIM chip (replaces the IWM) are installed. The 800K disk drive from the Macintosh II is supported and will continue to work as before. For more information, search under "Macintosh II 800K Drive".
