Apple Tape Backup 40SC: Restore Volume Backup To Original Disk

This article last reviewed: 7 January 1988

You can use either the "Backup Files" or "Backup Volume" option on the Tape Backup 40SC, but "Volume" backups should be restored only to the SAME hard disk. "File" backups may be restored to any hard disk that have enough room to store the files from the original hard disk.

Distributing backup material by tape is also possible -- as long as the backup of the original material was done using the "Backup Files" option. If you use the "Backup Volume" option, the hard drive you are restoring to must have exactly the same number of blocks as the original hard drive.
