Apple Tape Backup 40SC: Don't Try To Backup Over A Network

This article last reviewed: 18 May 1988

You will probably have a problem if you try to back up data over a TOPS network to an Apple Tape Backup 40SC. The reason is that Apple Tape Backup software is designed for local backup only. In fact, if you try to back up files from a computer other than the one you've connected the backup unit to, the backup software returns an error message that it cannot back up server files.

Other products let you back up over a network. SuperMac Software's Network DiskFit is one product that is designed specifically for backing up AppleShare or TOPS servers and workstations.
