## Apple 40SC Backs Up Files To 38.5MB

This article last reviewed: 20 January 1989

When doing a file backup, 38.5MB is the largest file that can be backed up using the Apple 40SC tape backup unit and Apple software.

An oversize (larger than 38.5 megabytes) file may not be backed up across multiple tapes. It is possible to back up an oversize file using a third-party utility, such as DiskFit from SuperMac Technologies.
