TOPIC -----

I'm unable to do a volume restore to a different size drive using the Apple Tape Backup 2.0.1. Is there any workaround to the exact size requirement of Apple's backup software?

DISCUSSION -----

The Apple Tape Backup does insist on restoring to a volume that's the exact size of the original.

There is a way around this (it works only if your backup is a volume backup). An INIT called Tape Disk comes with Tape Backup 2.0.1. Install this INIT into your System Folder and restart. Your tape will show up on the Desktop--just like a drive icon. You then simply drag over any files you want to the hard disk.
