GeoPort Adapter: Version Differences (6/94)

Article Created: 7 June 1994

TOPIC ---

This article describes the differences in GeoPort adapter models and which
versions to use outside the United States.

DISCUSSION --

There are 3 versions of the GeoPort adapter, two of these can be used
internationally, one can only be used within the United States.

```
Model          Computers                    International
-----          ---------                    -------------
M1694LL/A      Quadra 660 and 840           No
M1694LL/B      Quadra 660 and 840           Yes
M3127LL/A      Quadra and Power Macintosh   Yes
```

Model M1694LL/A can only be used with Quadra computers. This model has a problem
with very old telephone equipment, which will not allow the GeoPort to break the
dialtone. It can only be used within the United States.

Model 1694LL/B corrects the problem where the Tip and Ring line are transposed.
The software included with this model does not support the Power Macintosh
computers. However, with the proper software, this model could be used with the
Power Macintosh. It can also be used both inside and outside the United States.

Model M3127LL/A is essentially Model 1694LL/B, but it contains software that can
be used in both Power Macintosh and Quadra computers. This model can also be
used internationally.
