GeoPort 1.0, 2.0 and High Speed Fax, V.17 (6/95)

Article Created: 13 June 1994
Article Reviewed/Updated: 20 June 1995

TOPIC ---

I need to disable the high speed Fax feature to dial into an older Fax that will
not accept my documents. Page 35 of the "Express Fax/Modem User's Guide" shows
a screen shot of the Fax Terminal preferences dialog box. The manual displays
an option to turn off "high speed Fax feature". I don't have this option on my
screen. I'm using Fax Terminal 1.5.1, Power Macintosh 6100/60AV, GeoPort
Adapter, GeoPort for Power Macintosh 1.0.

Does the "high speed Fax feature" disabled on the fly, or is there a manual
switch to enable and disable high speed Faxing?

DISCUSSION --

Geoport 1.0
The Geoport for Power Macintosh version 1.0 only supports Fax transmission
speeds up to 9600 bps (CCITT V.29).

The user's guide for the Express Modem software that ships with the Power
Macintosh references high speed Fax capabilities. The option for high speed Fax
will not appear in Fax Terminal's preferences window.

The high speed Fax option is only available when Express Modem software is being
used with an Apple Express Modem on a PowerBook or Macintosh with an Express
Modem installed.

Geoport 2.0
Apple Telecom Software version 2.0 will support high speed faxing (V.17) on a
Power Macintosh. The Quadra, and Centris AV Family of computers will not
support v.17 speeds.

V.17 fax speed is disabled by launching the Fax Terminal software under the
Apple Menu. Under the "Fax" menu, drag down to "Preferences", unselect the box
next to "Allow v.17 faxing".

Article Change History:
20 Jun 1995 - Updated with GeoPort 2.0 fax speed information.
