PowerBook Fax/Data Modem: Doesn't Pass Break Signal 8/92

Article Created: 10 January 1992

Article Reviewed/Updated: 4 August 1992

TOPIC -----

If you attempt to send a break signal to a remote host with the Macintosh PowerBook Fax/Data Modem, it won't pass the break signal to the host. Instead, it causes the modem to go back to command state.

How do you pass a break signal to the host without putting the modem into its command state?

DISCUSSION -----

Unfortunately, any attempt to transmit a break signal with the Macintosh PowerBook Fax/Data Modem always results in the modem going into command state. It won't send the break signal to the host.

Many modems allow you to change break handling so you can determine whether the modem enters command state or simply passes the break signal. The PowerBook Fax/Data Modem doesn't do this.
