Global Village PowerPort Gold: PPP Initialization String (9/95)

Article Created: 26 September 1995

TOPIC ---

What initialization string should I enter for PPP access using a Global Village
PowerPort Gold modem which came with my Performa?

DISCUSSION --

The recommended initialization string for dialing into UNIX-based PPP servers
would be:

AT&F1%C0\NO (NOTE: Use zeroes, not the letter "o")

This command string resets the modem to factory defaults and turns off hardware
compression and error correction.

For other PPP servers, use the initialization string:

AT&F1

This command string resets the modem to factory defaults.
