Apple OneScanner: Scan-in-progress LED Doesn't Function (4/94)

Article Created: 4 April 1994

TOPIC ---

In the Color OneScanner and OneScanner manual, it states that the
scan-in-progress light comes on while scanner is scanning an image. My
scan-in-progress light does not do this. Is the Scanner defective?

DISCUSSION --

The scan-in-progress LED indicator only operated in early versions of the unit.
The User's Manual was written and printed when the early units were available.
Later when firmware enhancements were made, the functionality of the
scan-in-progress LED ceased. The LED simply has no useful function on later
versions of the scanner. However, this does not imply that the unit is
defective.
