Apple OneScanner: Image Editing Software

Article Created: 9 October 1991

TOPIC ---

Why doesn't the Apple OneScanner ship with image editing software, such as
Photoshop or ColorStudio, as do most other scanners?

DISCUSSION --

Image editing software isn't necessary for mainstream scanning. Other
vendors require a multitude of image editing tools to adjust a scanned
image to match the original, whereas Ofoto software automatically produces
an accurate scanned image.

Image editing programs actually complement the OneScanner. Customers can
benefit from those programs, but they aren't necessary for the basic
purpose of getting an excellent scanned image.
