Apple Scanner: Ofoto Upgrade for 32-Bit Addressing (12/93)

Article Created: 30 April 1992
Article Change History: 23 December 1993

TOPIC --

I have the original Apple Scanner, and I'm using the latest version of
AppleScan, which I downloaded from AppleLink. This software doesn't seem
to support 32-bit addressing. How can I use the Apple Scanner and 32-bit
addressing under System 7?

DISCUSSION ---

The older versions of the Apple Scanner software do not support 32-bit
addressing. To use your Apple Scanner and 32-bit addressing under
System 7, you need to purchase Ofoto from LightSource, Inc., which is the
software we include with our newer Apple OneScanners. This is especially
important if you have a Centris 660AV, Quadra 660AV and Quadra 840AV, all
which run only in 32-bit addressing mode.

Ofoto is not available as a separate product from Apple. However, there are
two Ofoto upgrade kits available from LightSource: one version works only
with the Apple Scanner, and the other version works with all scanners.

For more details, search on "Lightsource."
